(54) PLASTIC SUBSTRATE FOR ELECTROLUMINESCENCE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a transparent electricity conductive film, which has transparency, which can be used as a transparent electricity conductive substrate for electroluminescence, and is excellent in adhesion and in heat resistance.

SOLUTION: It is the plastic substrate for electroluminescence, which is laminated with the transparent electricity conductive tin film to the film consisting of an annular olefin system polymer.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]
